VAPOR TECHNOLOGY ASSOCIATION ON PROPOSED FDA REGULATIONS

“FDA WOULD DELIVER A FATAL BLOW TO THE VAPOR INDUSTRY WHILE HARMING PUBLIC HEALTH”

WASHINGTON, DC – Today, the Vapor Technology Association (VTA) issued the following statement on the Food and Drug Administration’s (FDA) proposed one-size-fits-all approach to the regulation of vapor products as tobacco products in the United States. Vapor products represent the first game-changing technology in the ongoing campaign to reduce cigarette smoking and have been driving down the combustible tobacco use. Now, the FDA’s U.S. regulatory policy, which is rumored to be announced this month, will only serve to eliminate products that have high acceptance among adult cigarette smokers, and ultimately harm the broader public health goal of deterring tobacco use.

“Despite an overabundance of distorted and misleading information propagated by some in the public health community, the science is clear – responsibly manufactured vapor products are not only a safer alternative to traditional combustible products, but also provide smokers with a viable path to reducing their tobacco consumption and quitting altogether,” said Tony Abboud, VTA’s National Legislative Director. “The FDA’s actions will not improve our nation’s public health objectives. To the contrary, they will yank responsibly manufactured vapor products from the hands of adult smokers and replace them with the cigarettes they had been trying to give up.”

“Moreover, by simply dumping vapor technology products into an already antiquated federal regulatory scheme, the FDA will, in one stroke, wipe out nearly a decade of widespread consumer acceptance of these products. At the same time, the FDA will kill nearly a decade of innovation in the vapor technology industry and the many thousands of small and mid-size businesses in communities across this country who have invested in establishing retail stores and developing new technologies that sit outside of the influence of Big Tobacco. If enforced as drafted, the unreasonable and excessive regulations proposed by the FDA will only serve to put these innovators out of business, their employees out of work, and will hand deliver Big Tobacco a monopoly on vapor products” added Abboud.

VAPOR TECHNOLOGY ASSOCIATION

The FDA has received hundreds of thousands of comments on their proposed regulation. Opponents of vapor products who so loudly call for the FDA to act immediately are hoping that the FDA ignores the rapidly growing body of research supporting the hope of vapor products.

VTA and its members are developing strict industry standards and responsible regulations that protect children from vapor and ensure the safety and integrity of vaping products used by adult consumers. But, the FDA's proposed regulations will do little to enhance product safety. So, while the FDA has been falling behind the rest of the world in the development of product standards, VTA and its members have been working with the international community, including the International Organization for Standardization and the European Committee for Standardization (CEN), to establish product and business standards to guide the vapor industry in the USA.

The Vapor Technology Association represents the manufacturers, wholesalers, small business owners and entrepreneurs who have developed innovative and quality vapor products, providing adult consumers with a better alternative to traditional combustible products. VTA and its members are leaders in the vapor community, promoting small businesses and job growth, responsible public policies and regulations, and strong industry standards.
